

World Cup Capybaras Whitepaper v0.9 - Qualification Slots/Base Update

Project name: World Cup Capybaras

Game direction: Knockouts Capybaras / qualification-slot game

Version: v0.9

Status: Draft for publication

Chain: Base

Supply: 1,500 NFTs

Mint date: TBD

Mint price: TBD

Mint platform: TBD

Visual asset: World Cup Capybaras whitepaper scene

1. Project Summary

World Cup Capybaras is a football-inspired NFT collection built around a tournament-style community game.

The public project name remains World Cup Capybaras. The updated game direction is Knockouts Capybaras, now using a Qualification Slot Model.

Instead of distributing NFTs directly across all 48 national teams before the tournament, the collection represents the 32 qualification slots that enter the knockout stage:

- 12 group winner slots;
- 12 group runner-up slots; and
- 8 best third-place qualification slots.

This keeps the game tied to the official tournament structure while making the collection easier to understand: each NFT is assigned to a qualification slot such as A1, A2, or 3Q1. After the group stage, that slot resolves to the real team that earned it.

The collection is planned for Base. Mint date, mint price, and mint platform are currently TBD.

2. Launch Configuration

| Item | Current Definition |

| --- | --- |

Public project name	World Cup Capybaras
Game direction	Knockouts Capybaras / qualification-slot game
Chain	Base
Total supply	1,500 NFTs
Mint date	TBD
Mint price	TBD
Mint platform	TBD
Reveal timing	TBD; after mint closes and before gameplay starts
Active supply	NFTs minted before the official cutoff
Unsold NFTs	Do not participate in rewards

The project will not treat unsold NFTs as eligible game participants. Only NFTs that are part of the active minted supply can participate in tournament reward logic.

3. Qualification Slot Model

The 2026 tournament structure used as game context has 48 teams split into 12 groups.

The knockout field has 32 teams:

- the top 2 teams from each of the 12 groups qualify directly;
- the 8 best third-place teams overall also qualify.

World Cup Capybaras represents these 32 knockout qualification slots.

3.1 Slot ID System

Group winner slots:

Slot format	Meaning
A1	Winner of Group A
B1	Winner of Group B
...	...
L1	Winner of Group L

Group runner-up slots:

Slot format	Meaning
A2	Runner-up of Group A
B2	Runner-up of Group B
...	...
L2	Runner-up of Group L

Best third-place slots:

Slot format	Meaning
---	---
3Q1	Best third-place qualifier overall
3Q2	Second-best third-place qualifier overall
...	...
3Q8	Eighth-best third-place qualifier overall

Third-place slot order follows the official tournament ranking and tiebreaker order used to determine the 8 best third-place qualifiers.

4. Slot Supply Allocation

The collection has 1,500 NFTs across 32 qualification slots.

The supply is intentionally weighted by expected qualification strength:

- group winners have the most NFTs;
- group runners-up have fewer NFTs;
- best third-place qualifiers have the fewest NFTs.

Slot type	Slot IDs	Slots	NFTs per slot	Total NFTs
---	---	---	---	---
Group winners	A1-L1	12	54	648
Group runners-up	A2-L2	12	45	540
Best third-place #1	3Q1	1	42	42
Best third-place #2	3Q2	1	41	41
Best third-place #3	3Q3	1	40	40
Best third-place #4	3Q4	1	39	39
Best third-place #5	3Q5	1	38	38
Best third-place #6	3Q6	1	38	38
Best third-place #7	3Q7	1	37	37
Best third-place #8	3Q8	1	37	37
Total		32		1,500

This means a first-place group slot is more common than a second-place group slot, and a third-place qualifier slot is scarcer than both.

The previous closest-even 48-team allocation concept is now archived and should not be treated as the current rule.

5. Reveal, Slot Assignment, and Team Resolution

The collection will use a delayed reveal.

Before reveal, NFTs may display generic pre-reveal Capybara artwork.

Visual asset: World Cup Capybaras pre-reveal artwork

After mint closes, the active supply will be confirmed and the reveal process will begin. Reveal timing is currently TBD, but reveal is intended to happen after mint closes and before gameplay starts.

At reveal, each NFT is expected to show:

- final Capybara artwork;
- assigned qualification slot;
- slot type;
- reward weight;
- Captain status, when applicable.

After the tournament group stage is complete, each slot resolves to the real team that earned that slot.

Example:

- A1 resolves to the winner of Group A.
- A2 resolves to the runner-up of Group A.
- 3Q1 resolves to the best third-place qualifier overall.

Once a slot is assigned to an NFT, the slot assignment is final. Once official group-stage results are verified, the resolved team for that slot is final for game purposes.

6. Captain NFTs

Each qualification slot will include 1 Captain NFT.

There are expected to be 32 Captain NFTs total, one for each qualification slot.

Captain NFTs are special slot NFTs with a reward weight of 2 reward shares when eligible.

Reward share weighting:

NFT type Eligible reward share weight
--- ---:
Standard eligible NFT 1 share
Eligible Captain NFT 2 shares

Captains do not bypass any game rule, snapshot rule, listing rule, wallet-holding rule, or eligibility rule. A Captain NFT must satisfy the same eligibility requirements as any other NFT to receive rewards.

If a Captain NFT is not eligible for a matchday or round, it receives no reward for that event.

7. Reward Share Calculation

When a reward is distributed for an eligible knockout-stage event, the reward pool for that event is divided by total eligible reward shares.

Example:

If an eligible winning slot includes:

- 10 standard eligible NFTs
- 1 eligible Captain NFT

Then total reward shares are:

- 10 standard NFTs x 1 = 10 shares
- 1 Captain NFT x 2 = 2 shares
- Total = 12 reward shares

The Captain receives 2 shares. Each standard eligible NFT receives 1 share.

This system lets Captains receive double the reward share while keeping eligibility rules consistent across all NFTs.

8. Metadata Traits

Final metadata may include, but is not limited to:

- Qualification Slot
- Slot Type
- Slot Supply Tier
- Resolved Team, after group-stage results are verified
- Captain status
- Reward weight
- Game format
- Artwork traits

Expected game-specific traits:

Trait Example
--- ---
Qualification Slot A1
Slot Type Group Winner

Slot Supply Tier	Winner slot / 54 NFTs
Resolved Team	Winner of Group A, once known
Captain	Yes / No
Reward Weight	1 or 2
Game Format	Knockouts Capybaras
Chain	Base

The project may adjust non-game artistic traits before final metadata publication. Slot assignment, Captain status, and reward weight must be handled consistently with the published rules.

9. Matchday Snapshots and Listing Eligibility

For each active reward event, the project may take two official snapshots:

1. Pre-event snapshot
2. Post-event snapshot

After the post-event snapshot, the project will calculate preliminary eligible NFTs based on:

- the NFT being held by the same wallet in both snapshots;
- the NFT's qualification slot resolving to, qualifying for, participating in, or advancing through the active knockout-stage reward event, depending on the published event rules;
- the NFT being part of the active minted supply.

The project will then verify whether any preliminary eligible NFT was listed for sale at any point during the event window.

If an NFT was listed for sale at any time between the pre-event snapshot and the post-event snapshot, that NFT is not eligible to receive that event's reward.

The event window begins at the official pre-event snapshot and ends at the official post-event snapshot.

Final event eligibility is confirmed only after listing verification is completed.

10. Reward Eligibility

An NFT is not automatically eligible for a reward simply because its resolved team performs well.

To be eligible for a knockout-stage event or round reward, an NFT must satisfy the active published criteria, including:

- being part of the active minted supply;
- being held by the same wallet in the pre-event and post-event snapshots;
- having a qualification slot that resolves to a team that qualifies under that event's knockout-stage result rules;
- not being listed for sale at any time during the event window;
- satisfying any additional published eligibility rule for that event.

Captain NFTs follow the same eligibility rules. The only difference is reward-share weight: an eligible Captain counts as 2 reward shares instead of 1.

11. Listing Rule

NFTs listed for sale during an active reward event window are not eligible for that event's reward.

This rule is intended to discourage short-term listing behavior during active gameplay windows and protect the game logic from abuse.

The listing window begins at the official pre-event snapshot and ends at the official post-event snapshot.

A listed NFT may still participate in future events if it satisfies the future event's eligibility rules.

12. Reward Pool Notes

Reward pool details, reward funding, payout mechanics, payout timing, and operational procedures may be published separately before the game starts.

The project may use manual or automated verification workflows to calculate eligibility. Final reward eligibility is confirmed only after the project completes snapshot review, wallet review, slot resolution review, team-result review, and listing verification.

No reward is guaranteed unless all published eligibility requirements are satisfied and the project confirms final eligibility.

13. Community and Discord

The Discord server is the main community coordination space for:

- official announcements;

- rules and security updates;
- mint information;
- team and slot discussions;
- raffle and collab information;
- reward and knockout-stage updates.

Community team roles do not change NFT metadata, qualification slot assignment, resolved team, reward eligibility, or reward share weight.

Members should only trust links posted in official channels. The team will never ask for seed phrases, private keys, wallet passwords, or secret recovery phrases.

14. Safety and Anti-Scam Rules

Users should follow these safety rules:

- Never share a seed phrase or private key.
- Never trust unsolicited DMs claiming to be support.
- Only use links from official project channels.
- Verify mint information before interacting with any contract or page.
- Treat fake mint links, fake support accounts, and fake airdrops as scams.

The project may update safety rules as needed before mint and before gameplay starts.

15. Non-Affiliation Disclaimer

World Cup Capybaras is not affiliated with FIFA, the FIFA World Cup, national teams, federations, leagues, sponsors, players, or official tournament organizers.

All football, country, and tournament-inspired references are used as part of an independent community collectibles game concept.

16. Risk Disclaimer

NFTs involve risk. Participation in the project should not be considered financial advice, investment advice, or a guarantee of profit.

Mint details, marketplace behavior, network fees, reward mechanics, eligibility verification, metadata updates, and project operations may involve technical and operational risks.

Users are responsible for their own wallet security and transaction decisions.

17. Version History

| Version | Summary |

| --- | --- |

| v0.6 | Earlier Ethereum/Highlight-oriented draft |

| v0.7 | Mint/reveal and snapshot/listing clarification draft |

| v0.8 | Knockouts/Base update with closest-even 48-team allocation concept |

| v0.9 | Qualification Slot Model: 32 knockout qualification slots,
A1-L1/A2-L2/3Q1-3Q8 IDs, weighted slot supply, Base/TBD launch details |

18. Current Status

This v0.9 whitepaper is the current project direction draft.

Before final launch, the project should confirm:

- mint platform;
- mint date;
- mint price;
- final reveal process;
- final slot metadata process;
- final slot resolution process after group-stage results;
- final snapshot timing;
- final knockout reward event schedule;
- final reward pool mechanics;
- final contract and metadata deployment details.
